User Experience Design (UX)

Scalability and Performance Optimization

Reliable Connection Handling

←

Reliable Connection Handling

- Implement a robust connection handling mechanism to deal with scenarios such as device disconnections, network fluctuations, or interruptions
- Ensures a seamless and reliable real-time experience by addressing common challenges in peer-to-peer networking

Data Synchronization and Consistency

←

Data Synchronization and Consistency

- Develop a strategy for synchronizing data between connected devices to maintain consistency across the network.
- Guarantees that changes made on one device are promptly reflected on all connected devices, supporting collaborative and synchronized interactions.

Security and Encryption

←

Security and Encryption

- Prioritize security by implementing encryption mechanisms for data transmitted between devices.
- Protects sensitive information from unauthorized access, ensuring the privacy and security of user data during peer-to-peer interactions.

User Experience Design (UX)

User Experience Design (UX)

- Design an intuitive and user-friendly interface that clearly conveys the status of peer-to-peer interactions and provides users with easy-to-understand controls.
- Enhances user engagement and satisfaction by offer

Scalability and Performance Optimiz...

Scalability and Performance Optimization

- Optimize the system for performance and scalability to handle an increasing number of connected peers efficiently.
- Ensures the app remains responsive and reliable even as the user base and the number of simultaneous interactions grow.
